## SYDNEY TECHNICAL HIGH SCHOOL

# YEAR 12 HSC ASSESSMENT TASK 2

### **MARCH 2008**

#### **MATHEMATICS**

### **Extension 1**

I mie Anowed.	70 innuces
Instructions:	<ul> <li>Attempt all questions</li> <li>Start each question on a new page</li> <li>Show all necessary working</li> <li>The marks for each question are indicated next to the question</li> <li>Marks may be deducted for careless or badly arranged work</li> <li>Marks indicated are a guide only and may be varied if necessary</li> </ul>

Name: \_\_\_\_\_ Teacher: \_\_\_\_

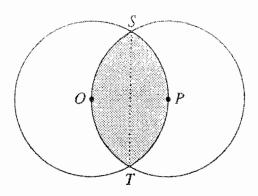

Question 1	Question 2	Question 3	Question 4	Question 5	Total

# QUESTION 1 (10 Marks)

- a) Find the gradient of the tangent to the curve  $y = \cos^3 x$  at  $x = \frac{\pi}{6}$
- b) Evaluate  $\lim_{x\to 0} \frac{\sin 5x}{4x}$
- c) Write a primitive for  $(5-2x)^4$ 
  - d) Find  $\int \frac{x \, dx}{(1+x^2)^2}$  by first differentiating  $\frac{x^2}{1+x^2}$
  - e) Evaluate  $\int_0^{\sqrt{3}} \frac{x \ dx}{\sqrt{1+x^2}}$  using the substitution  $u = 1 + x^2$

## **QUESTION 2** (10 Marks)

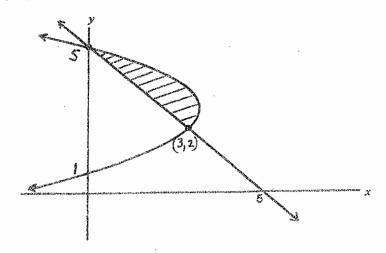

The points O and P in the plane are d cm apart. A circle centre O is drawn to pass through P. and another circle centre P is drawn to pass through O. The two circles meet at S and T. as in the diagram.

- i) Explain why angle SOT is  $\frac{2\pi}{3}$
- ii) Hence find the exact area of the shaded region in terms of d 2

2

b) The diagram shows the curve  $x = 6y - 5 - y^2$  and the line x + y = 5The two graphs intersect at (0, 5) and (3, 2)

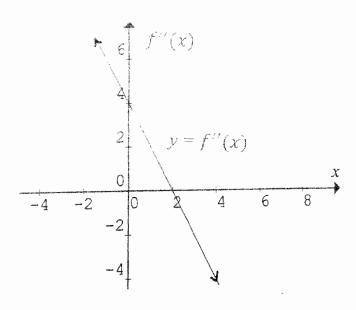

Determine the magnitude of the shaded area

c) For the curve  $y = x^5 - 80 x$ ,  $\frac{d^2 y}{dx^2} = 0$  at (0,0). Is (0,0) a point of inflexion? Justify your answer.

## **QUESTION 3** (10 Marks)

b)

This is the graph of y = f''(x)

- i) Find the equation of f'(x) if there is a stationary point at (1,4)
- ii) What is the nature of the stationary point at (1,4)? Give a reason.

2

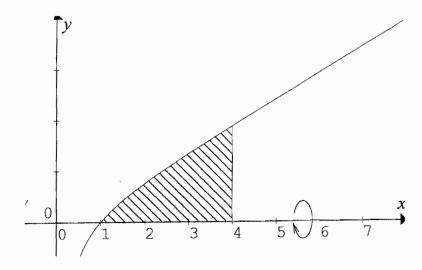

- i) Sketch on the same diagram the graphs of  $y = 2 \sin x$  and  $y = \cos 2x$  for  $0 \le x \le 2\pi$
- ii) Use your graph or otherwise determine a value for d, where d is an integer, so that the equation  $2 \sin x \cos 2x = d$  has 4 solutions in the interval  $0 \le x \le 2\pi$
- c) Find  $\int x^3 (x^2 + 1)^2 dx$  by using the substitution  $u = x^2 + 1$

## **QUESTION 4** (10 Marks)

- a) For the curve  $y = \frac{x^2}{1+x}$ 
  - i) Find the co-ordinates of the stationary points and determine their nature.
  - ii) Given  $y = \frac{x^2}{1+x}$  can be written as  $y = x 1 + \frac{1}{x+1}$ Write down the equations of any asymptotes 2

3

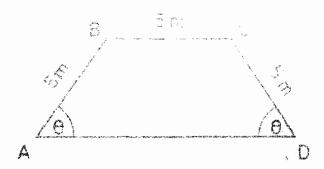

- iii) Sketch the curve showing the stationary points and the asymptotes 2
- b) 3

The shaded region in the diagram is bounded by the curve  $y = x - \frac{1}{x}$ , the x - axis and the line x = 4. Find the volume of the solid of revolution formed when the shaded region is rotated about the x - axis.

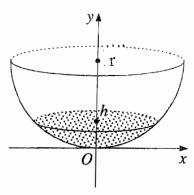

## QUESTION 5 (10 Marks)

a)

In a quadrilateral ABCD, BC is parallel to AD, the sides AB, BC, CD are each 5m long and the angles BAD, ADC each have size  $\theta$ , as shown in the diagram:

- Show that the area of the trapezium is given by the formula  $Area = 25 \sin \theta \ (1 + \cos \theta)$
- ii) Hence find the value of  $\theta$  for which this area is a maximum 4
- b) A hemi-spherical bowl is formed by rotating the semi-circle  $y = r \sqrt{r^2 x^2}$  about the y axis. The bowl contains water up to the height h where 0 < h < r.

Show that the volume of water in the bowl is

$$\frac{\pi h^2(3r-h)}{3}$$
