<u>Section I</u>

10 marks Attempt Questions 1 – 10 Allow about 15 minutes for this section Use the multiple-choice answer sheet provided for Questions 1 to 10.

1. A section of a proof by mathematical induction is shown below.

```
Test n = 1

LHS = n

= 1

\therefore true for n = 1

RHS = \frac{1}{6} \times 1 \times (1 + 1) \times (2 + 1)

= \frac{1}{6} \times 1 \times 2 \times 3

= 1
```

What is the name of this section of the proof?

- A. Initial statement
- B. Base case
- C. Inductive step
- D. Conclusion
- 2. What is the domain of the function $f(x) = 3\cos^{-1}\left(1 + \frac{x}{2}\right)$?
 - A. [-4, 0]
 - B. [-4, 4]
 - C. [-2, 2]
 - D. [-1,1]

3. What is the Cartesian equation of the curve with the parametric equations below?

$$x = 3\sin\theta + 1$$
$$y = 3\cos\theta$$

- A. $x^2 + (y 1)^2 = 3$
- B. $(x-1)^2 + y^2 = 3$
- C. $x^2 + (y 1)^2 = 9$

D.
$$(x-1)^2 + y^2 = 9$$

- 4. In $\triangle AOB$, OA = 10 cm, OB = 10 cm, and $\angle AOB = \theta$ radians. θ is increasing at a constant rate of 0.01 radians/second. What, correct to 2 decimal places, is the rate at which the area of the triangle is changing when $\theta = 1$?
 - A. $0.27 \text{ cm}^2/\text{s}$
 - B. 0.28cm²/s
 - C. 0.49cm²/s
 - D. $0.50 \text{ cm}^2/\text{s}$
- 5. Ten people, including Gordon and David, wish to board a plane. The plane has only one door, so only one person can board at a time. Given David has to board before Gordon, in how many ways can the 10 people board the plane?
 - A. 181 440
 - B. 362 880
 - C. 1814400
 - D. 3628800

- 6. Consider the vector u = 5i 12j. Which of the following is a vector which is perpendicular to u and has magnitude 26 units?
 - A. v = -12i 5j

$$\mathbf{v} = 12\mathbf{i} + 5\mathbf{j}$$

- C. v = 24i 10j
- D. v = -24i 10j
- 7. A bag contains 5 blue balls, 7 green balls, 8 yellow balls, 9 orange balls, and 10 red balls. Balls are drawn at random one at a time without replacement from the bag. What is the least number of balls that needs to be drawn from the bag in order to be certain that 8 balls of the same colour are amongst those selected?
 - A. 9
 - B. 34
 - C. 35
 - D. 36

8. Which of the following is an expression for $\int \frac{1}{ax^2 + a^2} dx$, where *a* is a constant?

A. $\frac{1}{\sqrt{a}} \tan^{-1}\left(\frac{x}{\sqrt{a}}\right) + C$ B. $\frac{1}{a} \tan^{-1}\left(\frac{x}{\sqrt{a}}\right) + C$ C. $\frac{1}{a\sqrt{a}} \tan^{-1}\left(\frac{x}{\sqrt{a}}\right) + C$ D. $\frac{1}{a^2} \tan^{-1}\left(\frac{x}{\sqrt{a}}\right) + C$

9. The quantity *N* increases exponentially over time according to the equation

 $N = P + Ae^{0.2t}$. The graph below shows the change in N over time (t).

Which equation describes the rate of change of *N* with respect to *t*?

A.
$$\frac{dN}{dt} = 0.2(N - 10)$$

B. $\frac{dN}{dt} = 0.2(N - 25)$
C. $\frac{dN}{dt} = 10(N - 0.2)$
D. $\frac{dN}{dt} = 25(N - 10)$

10. Consider the polynomial $P(x) = ax^4 + bx^3 + cx + d$, where the constant *a* is negative and the constant *b* is positive.

Which graph could represent y = P(x)?

End of Section I

<u>Section II</u> 60 marks Attempt Questions 11 – 15 Allow about 1 hour and 45 minutes for this section

In Questions 11-15, your responses should include relevant mathematical reasoning and/or calculations

Ques	tion 1	1 (12 marks)	Marks
(a)	Evalı	hate $\int_0^{\pi} \cos^2 \theta \ d\theta$.	3
(b)	Sketo	th the curve $y = \tan^{-1} x$, showing all important features.	2
(c)	Cons	ider the polynomial $P(x) = x^4 - 3x^3 - 6x^2 + 28x - 24$. It is known that $P(x)$	
	has a	triple root at $x = \alpha$.	
	(i)	By using differentiation, find the value of α .	2
	(ii)	Hence express $P(x)$ as a product of linear factors.	1
	(iii)	Hence solve $x^4 - 3x^3 - 6x^2 + 28x - 24 \ge 0$.	1
(d)	Use t	the <i>t</i> -formulae to solve $2 \cos x - \sqrt{3} \sin x = -2$, for $0 \le x \le 2\pi$.	3

Give your answer correct to 2 decimal places where necessary.

Quest	Question 12 (12 marks) Use a SEPARATE writing booklet.		Marks
(a)	(i)	Express $\sqrt{12} \sin x + 2 \cos x$ in the form $R \sin(x - \alpha)$, where $R > 0$ and	3
		$0 \le \alpha < 2\pi.$	
	(ii)	Hence, or otherwise, solve $\sqrt{12} \sin x + 2 \cos x = 2$, for $0 \le x \le 2\pi$.	1

- (b) Use mathematical induction to prove that $9^n 4^n$ is divisible by 5 for all integers **3** $n \ge 1$.
- (c) Find the coefficient of x^3 in the expansion of $\left(2x^3 \frac{1}{x^2}\right)^{11}$. 2
- (d) By using the substitution u = x + 1, or otherwise, evaluate $\int_0^1 x\sqrt{x+1} dx$, **3** correct to 2 decimal places.

Question 13 (12 marks) Use a SEPARATE writing booklet.

(a) Greta Hayes hits a hockey ball at an angle of 30° above the horizontal, at an initial **2** velocity of 35 ms^{-1} . Gravity acts downward at 9.8 ms^{-2} . By integrating $\ddot{y} = -9.8$, show that the ball reaches its maximum height before t = 2.

(b) Solve
$$\frac{3}{x} > x + 2$$
. 2

(c) In the diagram, *OABC* is a rectangle in which $\overrightarrow{OA} = \frac{5}{2}\underline{i}$ and $\overrightarrow{OC} = \underline{j}$. *P* is a point on *OA* such that $\overrightarrow{OP} = \lambda \underline{i}$, for some scalar parameter λ .

Use vector methods, and the fact that $\angle CPB = 90^\circ$, to show that $2\lambda^2 - 5\lambda + 2 = 0$, and hence find any values of λ .

(d) Consider the curves $y = 3 \cos 2x$ and $y = \sqrt{3} \cos x$, and the shaded region between them and the *y*-axis, as shown in the diagram below.

- (i) By solving the equations simultaneously, show that the two curves meet when $x = \frac{\pi}{6}$.
- (ii) Find the volume of the solid of revolution formed when the shaded region is rotated about the *x*-axis.

3

Marks

Question 14 (13 marks) Use a SEPARATE writing booklet.

(a) Use Mathematical Induction to show that for all integers $n \ge 1$.

$$\left(1 \times 1! + \frac{0}{1!}\right) + \left(2 \times 2! + \frac{1}{2!}\right) + \left(3 \times 3! + \frac{2}{3!}\right) + \dots + \left(n \times n! + \frac{n-1}{n!}\right) = (n+1)! - \frac{1}{n!}$$

(b) Consider the curve $x = \sqrt{4 - y^2}$, and the two vectors $u = i + \sqrt{3}j$ and $v = i - \sqrt{3}j$.

- (i) Sketch the curve, as well as \boldsymbol{u} and \boldsymbol{v} as position vectors.
- (ii) Find the angle between the two vectors *u* and *v*. Give your answer exactly, in 1 radians.
- (iii) Hence, or otherwise, find the exact area enclosed between the curve $x = \sqrt{4 y^2}$ and x = 1.
- (c) The velocity of a particle is given by $v = \tan t$, for $0 \le t \le \frac{\pi}{2}$, where *t* is the time in seconds.
 - (i) Use differentiation from first principles to find an expression for *a*, the **3** acceleration. You may use the fact that $\lim_{h \to 0} \frac{\tan h}{h} = 1$.
 - (ii) Find when the acceleration is $2m/s^2$, correct to 2 decimal places.
 - (iii) Find how far the particle has travelled in the first second in exact form. **2**

3

1

2

1

Question 15 (11 marks) Use a SEPARATE writing booklet.

(a) Find
$$\int_0^{\frac{1}{2}} \frac{\sin^{-1} x}{\sqrt{1-x^2}} dx.$$
 2

(b) *O* is at the base of a ramp inclined at an angle $\beta = \tan^{-1}\frac{1}{2}$ above the horizontal. A stone is projected from point *O* with speed *V* ms^{-1} at an angle $\alpha = \tan^{-1}\frac{4}{3}$ above the horizontal. The stone moves in a vertical plane above the ramp under gravity where the acceleration due to gravity is $g ms^{-2}$. At time *t* seconds the horizontal and vertical displacement of the stone relative to *O* is given by:

$$x = Vt \cos \alpha$$
$$y = Vt \sin \alpha - \frac{1}{2}gt^{2}$$

(Do **not** prove these results.)

- (i) Show that the stone hits the ramp at time $t = \frac{V}{g}$ seconds.
- (ii) Hence or otherwise, find the angle of impact, θ , between the stone and the ramp.
- (c) The first rows of Pascal's triangle are shown below. Consider an ordering of the numbers, counting down and across the rows, as given in the diagram.

Find the sum of the first 496 numbers of Pascal's triangle.

Suption 11 MARKER'S COMMENTS
d)
$$2\cos x - \sqrt{3} \sin x = -2$$

Let $t = \tan \frac{\pi}{2}$
 $\therefore \cos x = 1 - t^{2}$ and $\sin x = 2t$
 $1+t^{2}$ $1+t^{2}$
 $\therefore 2\left(\frac{1-t^{2}}{1+t^{2}}\right) - \sqrt{3}\left(\frac{2t}{1+t^{2}}\right) = -2$ $-\frac{1}{2}$ mark
Multiply both sides by $1+t^{2}$: Substitution.
 $2\left(1-t^{2}\right) - \sqrt{3}\left(2t\right) = -2\left(1+t^{2}\right) - \frac{1}{2}$ mark
 $1 + 2 + 2\sqrt{3}t = -2 - 2t^{2}$
 $-2\sqrt{3}t = -4$
 $t = 2$ $-\frac{1}{2}$ mark
 $\sqrt{3}$
 $\therefore - \tan \frac{\pi}{2} = \frac{2}{\sqrt{3}}$
 $x = 2 \times \tan^{-1}\left(\frac{2}{\sqrt{3}}\right)$
 $x = 1.71$ (2 decimal place) $-\frac{1}{2}$ mark
Next we must also fest $2C = \pi$
 $rast$

Students evolucite sinty f 41 me half marks $\frac{0}{12} \frac{3}{12}\pi + \frac{\pi^2}{7} \quad or \quad \frac{3}{2}\sqrt{3}\pi + 8\pi^2$ for expansion errors and other minor evaluation emors. Various forms accepted. Please keep exact. From : $9 \times \frac{1}{2}(\cos 4x+1) - 3 \times \frac{1}{2}(\cos 2x+1) dx$ V = π mark $\frac{\pi}{2}$ (cosymptotic dx) - $\frac{3\pi}{2}$ (cos 2x +1) dx =911 \bigcirc 4 Sin 4x +2] - 315 1 Sin 2x +2 = 917 -0) $-\frac{3\pi}{2}$ Sin-T 1 5in 7 + 6 (<u></u>]3 /' $\frac{\sqrt{3}}{\sigma} + \frac{\pi}{6}$ more etc ··· Lots of minor algebraic and substitution errors In this question.

MARKER'S COMMENTS guestion 14 Initial statement $+(2)^{2}+\frac{1}{2}$ - 0 ` <u> nxnl + n-l =</u> <u>hl</u> rove the statement is true for RITS LHS= nx = (+1)!-11 + 12 1-1 = 21-11 = 2 - 1 2 1 LHS= RIZ d true for <u>- 1-k</u>

Conclusion By the principle of - Kent mathematical induction the initial statement holds truc for all integer nZI Maiker's Competer This question was poorly attempted by the majority of students. A number of students made mistakes with the inductive step. Also, stadants made errors when transcribing the eigne like multiplication and addition eyesbols. More care needs to be taken when transcribing - question as simplifyin æ quætis סר נריה

Markerie Comments. This question was poorly attempted by the majority of students as they failed to realise that the area between the curve and sc=1 represented the actual area of the segment of a circle! students are encouraged to write down the oppropriate formulae and then make the substitution. Incorrect substitution into the formulae was not given any masks as the question was simplified.

MARKER'S COMMENTS Markers Comments This question was poorly attempted by the gotten how to use the first princi edents need to re-visit these concepts 3 is a the crame'

MARKER'S COMMENTS 4(i) q=21+ t= 2 t = 2 1 - 2 t = 1 t = t = t $\frac{t=nt=1}{t=n_{f_{1}}s} = \frac{0-t=-t=-1}{2}$ sect = 2 or $\frac{1}{\cos^2 t} = 2 \qquad 0 \le t \le \frac{1}{2}$ $2\cos^2 t = 1$ $\cos t = \frac{1}{2} - \frac{1}{2} - \frac{1}{2} = \frac{1}{\sqrt{2}}$ ·· = 14 5 - Kinsk Marker's Connents This question was poorly attempted as a number of students forgot to consider the positivic and negative scenarios when taking the square most of a number. Also, some students forgot to consider Of t = M/2 is their final answer. Students are encouraged to consider restrictions given in the question

MARKER'S COMMENTS x= Stant dt - Knk ii) cost dE 1 0 - 1/2 - 1k - 15 (cos 0) C031 [In cos 1 - In []] $\frac{\cos 1 - 0}{\cos 1}$ Marker's Compen Quite well done students to vrite dt. They are also encourage to visit (tan t dtifor HSC)

12MAX 2024 AT4 QIS MARKER'S COMMENTS $\int \frac{\sin^2 x}{\sqrt{1-x^2}} dx = \int \frac{1}{\sqrt{1-x^2}} x \sin^2 x dx$ = (sin-'x) 2 $=\frac{1}{2}\left[\left(\sin^{-1}\frac{1}{2}\right)^{2}-\left(\sin^{-1}0\right)^{2}\right]$ $= \frac{1}{2} \left[\left(\frac{1}{6} \right)^2 - 0^2 \right]$ = 1× +2 2× -2/ TZ 2 marks Complete solution 1 mark Finds correct primitive Mony students need to revise the neverse chain rule! Integration by substitution could also be used to evaluate this integral, but many students need to revise the correct notation for changing variables; inventing your own notation (eq. $0 \sim \frac{1}{2}$) is not usually a good idea. See HSC solutions for the correct notation. Also note that in Extension 1, you will always be given the substitution, if it is required. If the exam doesn't give you a substitution, think if an easier way might be possible.

12MAX 2024 AT4 QIS MARKER'S COMMENTS 3 marks Complete solution 2 marks Solves quadratic up to t= ZUsind - Vcosol or equivalent merit mark Clearly states that the store hits the namp when x:y = 2:1 This question was poonly done. Many students failed to read the question, and made the enoneous assumption that the store londs when y=0. This fundamental error prevented them from demonstrating ony of the required skills. Also, this is a "show" greation: don't leave anything out! b) i x=Vtrost ż=Vcost = = V y = Vt sind - 19t2 y=Vsind-gt when t= f, y= Vsind-g(f) =<u>+</u>V-V $= -\frac{1}{E}V$

MARKER'S COMMENTS 12MAx 2024 AT4 QIS x=3~V tor= j= = V r = tan'(3)2 = 26.565 ramp tonB= = B B= ton" (2 2 = 18.434 . Angle of impact between store and ramp O=r+B = 26.565 ... + 18.434 ... = 45' Complete solution 3 marks Correctly finds angle between stone and horizontal (18.4°) 2 morks Connectly evaluates is= = V or y = - = V mark Note that only is and is one setul here; any calculations concerning x and y are irrelevant. Marks were not awarded simply for finding the apple of the ramp.
