SYDNEY TECHNICAL HIGH SCHOOL

YEAR 12 HSC COURSE

Extension 2 Mathematics

Assessment 1 March 2010

TIME ALLOWED: 70 minutes

Instructions:

- Write your name and class at the top of this page, and on all your answer sheets.
- Hand in your answers attached to the rear of this question sheet.
- All necessary working must be shown. <u>Marks may not be awarded for careless or badly arranged work.</u>
- Marks indicated within each question are a guide only and may be varied at the time of marking
- START ALL QUESTIONS ON A NEW PAGE
- Approved calculators may be used.

(FOR MARKERS USE ONLY)

1	2	3	TOTAL
/17	/17	/16	/50

QUESTION 1: (17 Marks)

Marks

5 (a) If $z = 1 - \sqrt{3}i$, find

(i) \bar{z} (ii) |z| (iii) arg z (iv) arg iz (v) $\frac{1}{z}$ (in simplest form)

(b) Given the ellipse $9x^2 + 16y^2 = 144$, find

1 (i) the length of the major axis

1 (ii) the eccentricity

1 (iii) the co-ordinates of the foci

1 (iv) the equations of the directrices

(v) the slope of the tangent at the point P $(3, \frac{3\sqrt{7}}{4})$

1 (vi) the equation of the normal at P $(3, \frac{3\sqrt{7}}{4})$ (DO NOT SIMPLIFY THIS)

2 (c) (i) Sketch the region where the inequalities

$$|z-2| \le |z-2i|$$
 and $|z-1-2i| \le 1$

hold simultaneously.

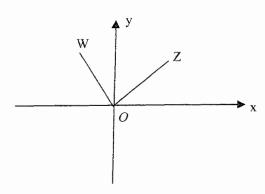

4 (ii) P is a point on the boundary of the region in part (i) above, and is represented by the complex number z, where $arg z = \frac{\pi}{4}$.

Find the 2 possibilities for z (in the form a+ib).

QUESTION 2: (17 Marks)

Marks

(a) The point Z, represents the complex number z = 2 + 3i

The line OZ is rotated anticlockwise by $\frac{\pi}{2}$ radians to form the line OW.

- 2 (i) Find the complex number w, represented by the point W.
- 2 (ii) Give the exact value of $\arg(\frac{z}{w})$
- 3 (b) For any point Z, representing the complex number z, you are given that arg(z-1) arg(z-i) = 0

On an Argand Diagram, draw the locus of the point Z.

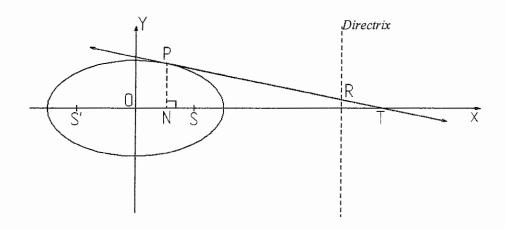

- 5 (c) (i) Prove De Moivre's Theorem by the process of Mathematical Induction. [NOTE: De Moivre's Theorem states that $(rcis \theta)^n = r^n cis n\theta$]
- 2. (ii) Express both 1+i and 1-i in the form $rcis \theta$
- 3 (iii) Using De Moivre's Theorem, or otherwise, and your answers to part (b) above, find, as a whole number, the value of

$$(1+i)^9 + (1-i)^9$$

QUESTION 3: (16 Marks)

Marks

(a) $P(x_1, y_1) \text{ is any point on the ellipse } \frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$

The tangent at P cuts the major axis of the ellipse at T and the Directrix at R, while N is the foot of the perpendicular from P to the x-axis.

O is the centre of the ellipse, while S and S' are the foci.

- 4 (i) Show that the equation of the tangent at P is $\frac{xx_1}{a^2} + \frac{yy_1}{b^2} = 1$ (Show all working)
- 1 (ii) Find the co-ordinates of the point T.
- 1 (iii) Show that ON.OT = a^2

QUESTION 3 continues overleaf....

.....QUESTION 3 continued

- (b) You are given the curve $y^2 = x^2(4 x^2)$,
- 1 (i) Find the points where this curve cuts the x-axis.
- 3 (ii) Use implicit differentiation, or otherwise, to show that $\frac{dy}{dx} = \frac{4x 2x^3}{y}$
 - (iii) By taking the positive square root of the curve only, the curve becomes

$$y = x\sqrt{(4 - x^2)}$$

- Show that, in this instance, $\frac{dy}{dx} = \frac{2(2-x^2)}{\sqrt{4-x^2}}$
- 3 (iv) Hence find the co-ordinates of the turning points on the new curve $y = x\sqrt{(4-x^2)}$ and identify their nature.

DO NOT ATTEMPT TO FIND THE SECOND DERIVATIVE

2 (v) Hence neatly sketch the original curve $y^2 = x^2(4 - x^2)$, showing all features found in the parts above.
